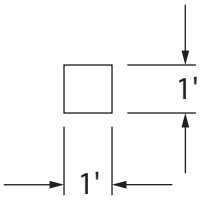
Heating Area Worksheet

Comfort Touch®
Comfort Heat®

Determining the area to be heated

1. Draw to scale the room to be heater. Calculate the total surface area.
2. Calculate the area occupied by permanent fixtures such as counters, baths, comodes, etc. Subtract from total surface area.
3. The resultant square footage will be the heating area of the floor. Choose a cable of the next size shorter that the heating area calculated to allow for a buffer zone that will accommodate any excess cable, if necessary.



For technical help, questions or comments consult your local representative or distributor, or call ETI Heat Systems, Inc. weekdays between 8:00am and 5:00pm EST (UTC minus five hours.)
